Operations

ALLEN INDEPENDENT SCHOOL DISTRICT

Due to shrinking budgets, our school district had to find a way to extend the functional lifespan of our **16,000** Windows computers.

ThinKiosk has been a lifesaver, allowing IT to quickly and economically convert computers incapable of effectively running Windows 7 into thin clients that connect to our Citrix and RDS server farms.

ThinKiosk gives us the ability to easily customize the user experience based upon campus and grade level, even exposing applications on the local computer that may have issues running in a virtual desktop.

> Users love that MagicFilter makes their thin client behave like a regular computer, exposing keystrokes and functionality not available on other thin client solutions.

The centralized console provides our IT staff a single place to manage all district thin clients, even remote control when a user has a problem.

Because of ThinKiosk's vast number of features and customizations, we are now able to use thin clients in many more scenarios than we could when utilizing GPOs and scripts.

I appreciate how ThinScale Technology eagerly accepts and implements customer feedback into new versions of the product, meaning it is constantly improving.

> The biggest compliment may be that teachers and students are constantly submitting help tickets asking for their rooms to be converted to the new "ThinKiosk Computers".

About Allen Independent School District

The Allen Independent School District serves the rapidly growing city of Allen, Texas, a suburban community located 23 miles north of Dallas. Student enrolment has more than doubled since 1989, bringing the current number of students to more than 20,000 in grades K-12. Students attend one of 17 elementary schools, three middle schools, one freshman centre and one high school.
